NONE

- Cancer _____ Diabetes _____ High Blood Pressure _____
- Thyroid dysfunction _____ Glaucoma _____ Blindness _____
- Macular degeneration _____ Retinal detachment _____

3D Eye Imaging and Retinal Screening:

This technology is part of Dr. Miller’s comprehensive exam and is used to detect the earliest signs of retinal disorders. A quick, painless and non-invasive 1 second scan allows us to take a digital photograph and 3D cross section scan of the back of your eye. This highly detailed scan can help to diagnose retinal disorders much earlier than previous methods. It is particularly useful when you return for your annual exam as it provides a permanent record of your retinal condition. Each year the data can be compared to detect any subtle changes and monitor your continuing eye health. Often new technologies are not covered by insurance plans. If your insurance does not cover this service, you will be charged a \$40 copay.

- YES: I understand the importance of 3D Eye Imaging and I grant permission.
- NO: I would like to speak with the doctor before deciding to proceed.

Guarantor of Billing Consent

Please be advised if you are using insurance coverage for today’s visit, this is a contract between you and your insurance company, not Envision Eye Care. If your insurance has not reimbursed our office within 90 days, you may be billed for services. Please sign below acknowledging that you understand.
